

Introduction of Lecture 3

This project is a simple Facebook post mockup built using HTML, CSS, and JavaScript.

- The **HTML file** (index.html) defines the structure of the post, including the profile section, post content, and action buttons.
- The **CSS file** (style.css) styles the post, giving it a clean and minimal Facebook-like design with proper spacing and alignment.
- The **JavaScript file** (script.js) adds interactive functionality, allowing users to like, comment, and share the post with alert messages.

This template serves as a basic UI demonstration for a social media post layout.

Notes are available on Discord server later.
