Introduction of Lecture 2

This project is a simple web page built using **HTML, CSS, and JavaScript**.

- The **HTML file** (HtmlTemplate.html) defines the page structure, including a heading and a paragraph.

- The **CSS file** (CssTemplate.css) styles the page with a light blue background and a centered dark blue heading.

- The **JavaScript file** (ScriptTemplate.js) adds an alert message welcoming visitors and providing information about the site.

This template serves as a basic starting point for a personal website, potentially including a resume.

Notes are available on Discord server later.

Discord server link is Available readme file.
